Class 06

In-depth JavaScript

ECMAScript

ECMAScript

- ECMAScript is a standard the company ECMA created of which JavaScript is built from and continues to implement and improve upon. ECMA has been shortened to ES as in ES6 or ES7.

Variables

Variables

- A variable is a storage place for a single value.
  - There there types of variables
    - Let - allows to assign to a different value
    - Const - cannot assign to a different value
    - Var - allows to assign to a different value

Scope

Scope

- Scope in programming refers to the area or space where a specific element, data, variable, or value is useable. The two types of scope are Local and Global.

Hoisting

Hoisting

- Hoisting means the movement of a variable or function to the top of its scope during its execution
